

supporting your manufacturing needs and training

Computer Aided Manufacturing

Post Processor Build

Resource Engineering Projects (REP) CAD/CAM / DMU division provides engineering support for CAM programs, offering bespoke rapid response support to engineering sectors worldwide.

From a 3D model REP can produce your CAM machining program. REP can provide individual engineers to support your existing teams, through to a fully managed project team either on or off site.

REP predominantly support and operate within the aerospace market with specialist expertise in the aero engine and aircraft structures sector, supporting numerous aircraft programs such as A330, A340, A380, A400M and various aero engine programs.

REP have the ability to create, manage and control teams that deliver high quality, right first time engineering, has seen REP awarded long-term contract extensions.

Post Processors

In support of our CAM engineers and in order to provide a complete product to manufacturing service, REP can design, develop and implement your post processors. With individual engineers having 20 years of experience in aerospace manufacturing, REP can provide expertise to create post processors for a wide range of machine tools using Post Builder with 3, 4, 5 Axes capability across, milling, turning and mill-turn centre's with additional experience in customised post processors with up to 15 linked posts.

Training

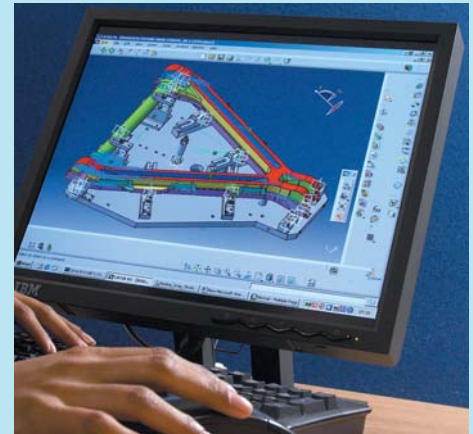

In addition to engineering support REP also offers consultancy and training. These can take place both on and offsite, within the areas of CAD, CAM and post processor build, for either an individual or a complete team, the choice is yours.

REP also provide services for PLM, CAD, DMU, Project Management & Contractor Supply

Software

REP currently support numerous software programs to facilitate our various clients work including:

- CATIA V4 & V5
- UG NX
- NX CAM
- CAM Express
- MFG Pro
- Post Builder
